Saving water at home

TEN Tips for saving water at home

From Kalirroï and Nirea

Color the sketch below:

Tips for saving water at home

1. Turn off the faucet while brushing your teeth or washing hands

2. Avoid bathing (with a full bathtub)...

While bathing with a full bathtub we use 180-200 liters of water, much more than when we take a shower!!!

3. Prefer instead a quick shower

We spend 75 to 120 liters of water for a 4-minute shower, while only 30 liters with the shower closed when soaping up!!!

We can also install water saving shower heads and shower timers.

6. Water your plants in the morning or evening

Watering the flowers is a good chance for fresh air. But be careful! Let's not water during the very hot hours of the day: the water evaporates very quickly from the sun and is not utilized by our plants. We select plants and flowers with low water requirements.

8. Place special bags, plastic bottles or even bricks inside your cistern to hold less water

In this way, the cistern will fill with less water and thus we will save at least 40 liters of water per day!

9. Become leak detectives!

We frequently check for leaks in the toilet bowl. Does it turn off the faucet after each use? Water leakage from the cistern can cause a loss of 190 liters of water per day!

To check if there is a leak we can put pastry paint in the cistern and if there is a leak the basin will be painted with the paint...
